

Understanding ISO/TS 16949:2002

Course Objectives

If your organisation is just getting started on its ISO/TS 16949:2002 compliance or certification, this course will provide the best overview for all personnel directly involved in the implementation process. Through individual participation and group activities, learn the intents and requirements of ISO/TS 16949:2002, including the process approach to management. Additionally, learn how ISO/TS 16949:2002 is necessary and valuable to your overall business management system. Participate in activities that create an understanding of Technical Specification intents and requirements and how the process approach, in conjunction with the intents and requirements, can provide benefits for your organisation and, most importantly, for your customers.

Course Outline

- The eight quality management principles
- The process approach and its impact on current quality management systems
- Terminology and exclusion requirements
- A practical application of each clause, how it relates to the intent of the standard, and how it is linked to the process approach
- Linkages of APQP, FMEA, MSA and SPC
- Connection of key requirements to participants' organisations

Who Should Attend

- Anyone who needs to learn about ISO/TS 16949:2002
- Internal trainers who want a simple, effective method of explaining ISO/TS 16949:2002 to employees
- Employees at every level
